

Week three 14/02/2022

This week's objective: Installing and testing clonaltree

Wow, we are already in week three!

This weeks objective is straightforward, go to this address :

<https://github.com/julibinho/ClonalTree>

follow the instructions, install clonaltree. There are also some test datasets available in the repo so you can then test the tool. Once you run the program successfully, take a look at the structure of the code, different files and functions, the format of the input, and the output file(s).

For the next week, you should be ready to use clonaltree, so if you have any problems installing or running it, please let me know.

Have a lovely week!
